IN THE CLAIMS:

Please cancel claims 1 to 3 without prejudice, and please rewrite as new claims 4 to 6.

4. A device for treatment of patients with disturbed posture and motor activity, comprising

pelvic supports installed on the trunk of a patient;

elastic tie-members on the surface of a patient's body are arranged in antagonistic pairs relative to the joints and designed for connecting said elastic tie-members with one another, each of said elastic tie-members is connected with two of said supports, provides the fixing of the joints in a required position and does not prevent the flexure, extension, abduction of the limbs

and movements of the trunk of a patient.

5. A device as set forth in claim 4, comprising shoulder, knee, elbow, hand and finger supports; and a plurality of the elastic tie-members designed for connecting said supports with one another, each of said elastic tie-members being connected with two of said supports.

6. A device as set forth in claim 5, comprising a plurality of means for adjusting the tension of said elastic tie-members;

one end of each from said adjusting means installed on a respective one from said elastic tie-members;

the other end of each from said adjusting means secured on a respective one from said supports;

a lock designed for securing said other end of said adjusting means on a respective support and for fixing the degree of tension of a respective elastic tie-member associated with a respective support, said adjusting means are used to regulate the
